# 1. Market commentary

The recovery in markets, which started in February, continued into March and by month-end many equity markets had recovered much of the ground lost in the big sell-off at the start of the year. A rally of 12.6% in the MSCI World index from the February lows to the end of March left the year-to-date return at -0.3%. Emerging markets led the way, with a return of 13.2% in March alone, taking the year to date return to 5.7%. Among the major developed equity markets the US produced the best return, 6.7% in March, bringing the S&P 500 index to within a whisker of its all-time high. Europe and Japan also rallied, but less strongly in local currency terms: continental Europe up 1.9% in euro terms in March; the UK up 1.7% (sterling terms) and Japan up 4.8% in yen terms. Credit participated fully in the rally in risk assets, with investment grade bonds up 2.8% in March, high yield up 4.4% and EM debt up 3.2%.

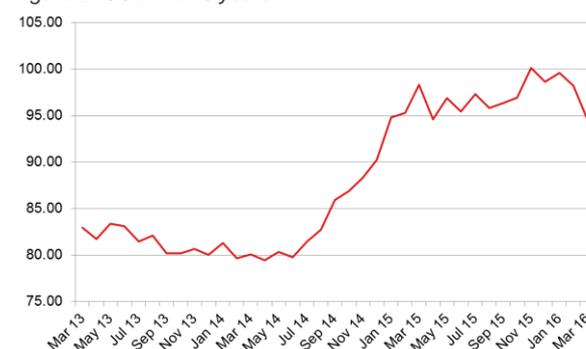

Figure 1. ECB interest rates

Several factors lay behind the recovery, aside from the fact that markets have oversold at the start of the year. First, the oil price bottomed in late January and rallied over 50% at time of writing, to above USD 40 per barrel. This eased the pressure on the oil sector and related companies, as well as on several important emerging economies. Second, signs that the key US, European and Chinese economies were showing stability after a soft patch, with a series of data releases which on balance pointed to continuing, albeit relatively subdued, growth added to the performance of risk assets. Third, once again the central banks provided big support, with the European Central Bank over-delivering on its long anticipated round of further monetary easing. The bank cut interest rates further into negative territory, extended the size and extent of its asset purchase programme,

and provided a new financing facility for Eurozone banks to help offset the problem of negative interest rates on profitability. The US Federal Reserve then delivered a series of more dovish statements, including changing its expectations for interest rate rises this year from four to two, and lowering its longer term expectations for interest rates by some 0.25 percentage points. Finally the weakness in the US dollar provided much needed relief to commodities and emerging markets, with several emerging currencies enjoying double digit gains. The greenback's trade-weighted index fell by 3.7% in March.

Figure 2. USD over 3 years

Notably the rally in emerging market equities started on the same day that the oil price bottomed; risk assets have in the short-term become highly sensitive to movements in the oil price. Despite record high crude inventories, evidence of significant falls in US oil production together with rising demand for oil provided support for the price, but arguably the most important factor was discussions among OPEC, and certain non OPEC members, of a production freeze at current levels. The April 17<sup>th</sup> meeting to discuss this is becoming a key focal point for markets. Whatever the outcome of this meeting, the prospect of a better balance between supply and demand is drawing closer, and by early 2017 the current oversupply in the oil market is likely to be at or close to an end. There are therefore improving prospects that the bottom of the market has been reached, and a modest recovery underway, towards the USD 50 level that many forecasters see as the new equilibrium price.

Figure 3. Oil price over Q1

Having experienced a strong rally, and against a background of subdued growth, corporate profitability under pressure, continuing debt problems especially in Europe, and question marks over extraordinary monetary policy, markets are due a period of consolidation. On the positive side, the worst fears and consequences of the crash in oil and commodity markets are now fully priced in and discounted, and we may already have seen the bottom in these markets; additionally economies continue to grow, albeit modestly, while emerging markets are 5 years

through the down cycle and offer recovery prospects from these levels. Finally, a damaging surge in inflation seems a distant prospect, and with USD 7 trillion of government debt, or about one third of the total in issue globally, trading with negative yields, risk assets are likely to see continuing support. However, with these competing forces on markets, it is likely that the volatility we have witnessed in the first quarter of this year will be a feature in the months if not years ahead. In these conditions we believe it is important to stay invested, broadly diversified, and patient. Alongside risk assets, safe havens such as investment grade bonds and gold or gold producers, offer good diversification and some protection from periods of market dislocation. Finally the big shift from growth to value stocks in the past quarter illustrates the benefit of diversification across equity styles, and with value still trading at relatively low levels, widespread opportunities still exist in the value sector globally.

### Important notes

This document is only intended for use by the original recipient, either a Momentum GIM client or prospective client, and does not constitute an offer or solicitation to any person in any jurisdiction in which it is not authorised or permitted, or to anyone who would be an unlawful recipient. The original recipient is solely responsible for any actions in further distributing this document, and in doing so should be satisfied that there is no breach of local legislation or regulation. This document should not be reproduced or distributed except via original recipients acting as professional intermediaries. This document is not for distribution in the United States.

Prospective investors should take appropriate advice regarding applicable legal, taxation and exchange control regulations in countries of their citizenship, residence or domicile which may be relevant to the acquisition, holding, transfer, redemption or disposal of any investments herein solicited.

Any opinions expressed herein are those at the date this document is issued. Data, models and other statistics are sourced from our own records, unless otherwise stated. We believe that the information contained is from reliable sources, but we do not guarantee the relevance, accuracy or completeness thereof. Unless otherwise provided under UK law, Momentum GIM does not accept liability for irrelevant, inaccurate or incomplete information contained, or for the correctness of opinions expressed.

The value of investments in discretionary accounts, and the income derived, may fluctuate and it is possible that an investor may incur losses, including a loss of the principal invested. Past performance is not generally indicative of future performance. Investors whose reference currency differs from that in which the underlying assets are invested may be subject to exchange rate movements that alter the value of their investments.

Under our multi-management arrangements, we selectively appoint underlying sub-investment managers and funds to actively manage underlying asset holdings in the pursuit of achieving mandated performance objectives. Annual investment management fees are payable both to the multimanager and the manager of the underlying assets at rates contained in the offering documents of the relevant portfolios (and may involve performance fees where expressly indicated therein).
