1. Market commentary

February was a month in which the majority of the news was subsumed by a rapid and substantial shift in the geopolitical environment – in this instance, the deterioration of the political situation in Ukraine, already the worst political crisis in Europe so far this century.

Until then, markets had recovered well post January’s weak start to the year, with a number of major equity markets reaching multi year, and in some cases (notably the US), all time highs. A combination of mixed economic data and dovish comments from new Federal Reserve Chair Janet Yellen pushed expectations for the first rise in US interest rates further out. While the Fed intends to continue with its current plan to taper in measured steps, the central bank also intends to remain extraordinarily accommodative, focusing on broader measures than just the headline unemployment rate to gauge the health of the US labour market.

This, together with greater stability in emerging market currencies that had been hit hard in the preceding twelve months, helped markets to recover. The US, Europe and UK all saw rises of close to 5%, with only Japan failing to participate out of the major markets, down by 0.7% in yen terms. The MSCI World index added 5% over the month, while emerging markets also recovered with gains of 3.3%.

Figure 1: Equity markets recover post January’s sell off (returns in local currency terms)

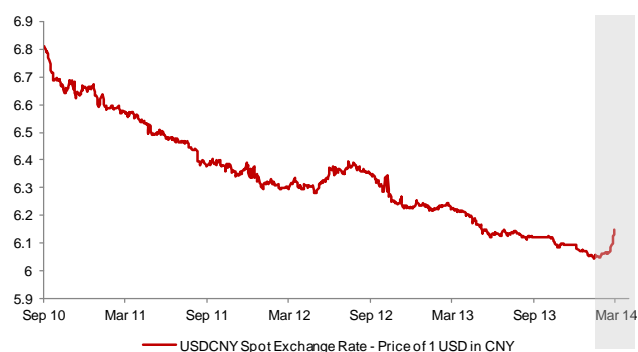

Outside the US the news appeared to support the case for a continuation of today’s ultra loose monetary policy. In the euro area inflation remains very subdued, below 1% across the block, and in some

countries in negative territory. Although the European Central Bank’s view is that inflation is being held back by price adjustments in peripheral states and there is no broader evidence of deflation, it is inconceivable that policy will remain anything other than exceptionally loose for a long time to come. The same applies in Japan where the Bank of Japan is taking measures to ease further in view of some disappointing growth statistics and in anticipation of the 3% sales tax hike in April. Only in the UK, where the economic recovery is steadily gaining traction, is there any prospect of a tightening of monetary policy in the next couple of years, but even there the Bank of England is using forward guidance to ensure market expectations remain well anchored.

Outside developed markets, events in China caused concerns and confusion during the month. In particular, the sudden move by the People’s Bank of China (PBOC) to weaken the renminbi led to heightened investor uncertainty and confusion around the reasons for the fall. Although modest in scale – a decline of 1.4% over the month – the fall happened in a period of only a few days and represents the biggest fall in the currency since the devaluation in 1994. The one way climb of the currency since that time has encouraged huge capital inflows and speculative carry trade positions, and it might be the central bank’s tactic to discourage these flows by reminding the market that the currency is susceptible to volatility. Whatever the reasons, the fall came in the wake of further disappointing data confirming the slowdown underway in China.

Figure 2: USDCNY spikes upwards during the middle of the month

The factors which drove equity markets higher – namely signs of the continued recovery in the developed world, but at levels that are unlikely to trigger an early tightening of monetary policy – also pushed bond markets higher. Yields on safe haven government bonds declined slightly over the month, while credit performed well.

A key factor in driving the prices of safe haven assets higher in the last few days of the month was the rapid deterioration of the political situation in Ukraine. The overthrow of the President and emergence of a new pro-west interim government, led to an immediate and powerful response from Russia. The military takeover of Crimea was declared necessary by Russia in order to protect the security of the region's near 60% Russian speakers. Russia points to the overthrow of a democratically elected government, a current government which lacks an inclusive and nationwide mandate, lawlessness and nationalist extremists. What it does not mention is the enormous strategic importance of Ukraine, with Russia's Black Sea fleet based in Crimea providing it with one of only two warm water, year-round ports as well as access to oceans otherwise a long way from Russia's Arctic ports. Western leaders have so far talked about pulling out of G8 meetings and other diplomatic moves, but it remains to be seen what impact this will have on Russia.

As at the time of writing, the most likely outcome appears to be a referendum. However, there is considerable uncertainty about the end result of the crisis, even if it seems to us that the risks of this becoming a drawn out political drama between Russia and the west are slim. The immediate impact on markets has been to weaken the ruble (down about 10% so far this year) while Russia's stock market has also fallen sharply, -7% in the first week of March. However there has been no widespread indiscriminate sell off and safe haven assets such as US treasuries and gold have not spiked upwards. Investors are hoping to see a peaceful and diplomatic solution to the problem, and so far appear to have placed a low probability on a major fallout.

If anything we believe that events such as this, which at the margin result in reduced business confidence and the prospect of a negative jolt to growth, will ensure that central banks will be even more cautious about tightening policy. The issue is, however, a timely reminder of the risks of investing in emerging markets. Russia for some time has appeared to be an extremely cheap market; this episode serves to remind investors why a low valuation may at times be appropriate to the level of risk.

Important notes

This document is only intended for use by the original recipient, either a Momentum GIM client or prospective client, and does not constitute an offer or solicitation to any person in any jurisdiction in which it is not authorised or permitted, or to anyone who would be an unlawful recipient. The original recipient is solely responsible for any actions in further distributing this document, and in doing so should be satisfied that there is no breach of local legislation or regulation. This document should not be reproduced or distributed except via original recipients acting as professional intermediaries. This document is not for distribution in the United States.

Prospective investors should take appropriate advice regarding applicable legal, taxation and exchange control regulations in countries of their citizenship, residence or domicile which may be relevant to the acquisition, holding, transfer, redemption or disposal of any investments herein solicited.

Any opinions expressed herein are those at the date this document is issued. Data, models and other statistics are sourced from our own records, unless otherwise stated. We believe that the information contained is from reliable sources, but we do not guarantee the relevance, accuracy or completeness thereof. Unless otherwise provided under UK law, Momentum GIM does not accept liability for irrelevant, inaccurate or incomplete information contained, or for the correctness of opinions expressed.

The value of investments in discretionary accounts, and the income derived, may fluctuate and it is possible that an investor may incur losses, including a loss of the principal invested. Past performance is not generally indicative of future performance. Investors whose reference currency differs from that in which the underlying assets are invested may be subject to exchange rate movements that alter the value of their investments.

Under our multi-management arrangements, we selectively appoint underlying sub-investment managers and funds to actively manage underlying asset holdings in the pursuit of achieving mandated performance objectives. Annual investment management fees are payable both to the multimanager and the manager of the underlying assets at rates contained in the offering documents of the relevant portfolios (and may involve performance fees where expressly indicated therein).
